

GIS training for the defence community

Combining forces to provide unparalleled learning

Equipping you with the GIS skills you need

ESRI (UK) understands that education and training are vital to getting the most from your geographic information systems (GIS) capability.

Our defence specific training course and learning path has been designed to complement the Royal Military School of Survey (RSMS) programme, giving you the full range of skills you need to confidently work with the ESRI products and techniques that transfer directly to the defence environment.

Learn with the leaders in GIS

ESRI (UK) is the UK's leading technical authority in GIS with over 15 years of training experience in the defence community. All our courses carry ISO9001 accreditation with many of our trainers TAP™ certified, ensuring you of the best training that supports your long term career development.

Develop your skills and career with quality GIS training that can be applied in many different environments, including:

- Managing defence estates and facilities
- Terrain analysis
- Intelligence assessment
- Targeting & surveillance
- Mission planning
- Infrastructure engineering
- Asset tracking
- Military & humanitarian assistance

The ESRI (UK) training programme

The ESRI (UK) training programme is designed to complement and support the RSMS programme at each stage, providing a complete learning path for GIS skills and career development.

Introduction to ArcGIS for Defence Users

This foundation course is designed to complement the RSMS GIS for Defence Staff course. Over 2-days, it teaches the students how to use ESRI ArcGIS tools to create, present and analyse geospatial data in a defence context.

For maximum effectiveness, this course is prepared and delivered by an ex- services trainer, using defence scenarios. For users, this will accelerate their ability to exploit ESRI ArcGIS tools in their roles and provides an excellent grounding for further RSMS training and ESRI (UK)'s more advanced courses.

Further skills and career development

As experience is gained, the student may then choose to develop their career by specialising in a specific area, such as database management, or to improve certain aspects of their skills by attending master classes or specialist desktop courses. These courses will be delivered by ESRI (UK) consultants who are specialists in their fields.

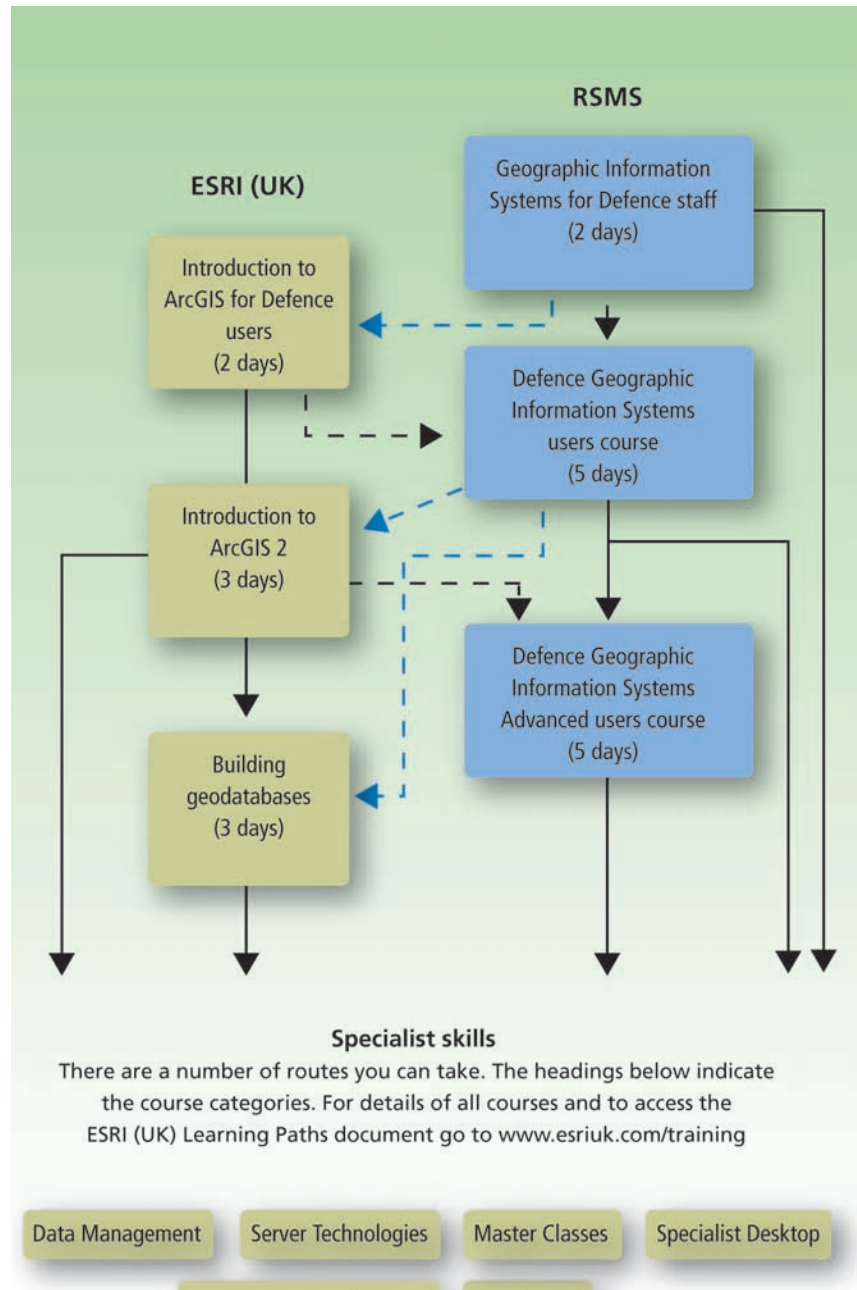

The RSMS GIS training programme

The RSMS runs a number of GIS courses for defence users. The *GIS for Defence Staff* course is designed to give Defence managers an underpinning knowledge of GIS functionality. The course is based on a series of lectures, demonstrations and discussion. Students do not use a GIS system.

The Defence GIS Users course provides an understanding of military geographic data and teaches students to use a GIS. Tuition is both theoretical and practical and uses a defence scenario with an Air, Land and Sea component. The Defence GIS Advanced Users course provides more experienced users with practical experience of the advanced functionality, such as 3D modelling, temporal analysis, site selection and collection of data using GIS.
